FOR IMMEDIATE RELEASE

EnZoo becomes Cyemptive Technologies

Woodinville, Washington, July 22, 2017 – Rob Pike, CEO of EnZoo, is pleased to announce the company has officially changed its name to Cyemptive Technologies, Inc., effective immediately.

Mr. Pike explained the new name more accurately reflects the company's dedication to Preemptive Cybersecurity. "The company has many exciting opportunities in the cybersecurity world and we feel we needed a name to more accurately represent this bright future."

Started in 2014, EnZoo began as a web hosting firm targeted to small and medium-sized businesses. However, the firm quickly realized the need to provide a secure environment for its customers. This resulted in a strategic pivot in 2015 to development of a secure web applications framework, and then to the current focus on real-time enterprise level cybersecurity solutions. Today, Cyemptive Technologies has several highly innovative security technologies either patented or patent-pending and products poised to disrupt the cybersecurity landscape.

Cyemptive's President Ed Martin said, "We feel this new name helps us to reach the broad spectrum of government and enterprise customers who are searching for strong and innovative solutions to the current cybersecurity challenges. Cyemptive is well-positioned to help these customers succeed."

Cyemptive Technologies, Inc. is based in Woodinville, Washington, and has employees in Arizona, Washington DC, Canada, and India.
